

## Raktajino

This is one of the favored drinks on Deep Space Nine. Many of her senior staff imbibe this tasty concoction regularly, so for those who wish to make it themselves, it is very simple to do. (Well, at least as close as our Terran ingredients can approximate the Klingon flavor.)

### Ingredients

espresso grounds

4 whole cloves

4 allspice pods

½ packet powdered milk

dash of nutmeg

cinnamon and sugar to taste

Combine all ingredients except the powdered milk and sugar into a coffee filter and brew the coffee as you would any other pot of coffee.

Add the sugar and powdered milk to a carafe while the coffee is brewing. Once the coffee has finished, add it to the carafe with the sugar and powdered milk while stirring.

Pour into a mug and enjoy!

## Iced Raktajino

For those who prefer to have a cold variety of this concoction, brew the recipe above and allow to cool to room temperature. After the coffee is cooled, chill in the refrigerator for at least four hours.

When ready to serve, pour coffee and ice cubes into blender and run the blender until the consistency is to your liking.

Pour into a tumbler and let this cold mixture crank up your morning.
